

Jeremy Tello

San Antonio, TX | +1 (210) - 501 - 9073 | [LinkedIn](#) | [GitHub](#) | jeremytello31@gmail.com | [Website](#)

Education

Texas A&M University-San Antonio

Bachelor's of Science, Computer Science

San Antonio, TX

June 2023 - May 2025

- *GPA: 3.50/4.00, President's List*
- **Related Coursework:** Computing in Python, Data Structures and Algorithms, Object-Oriented Programming, Machine Learning, Databases, Discrete Structures for Computing, Linear Algebra

Projects

[NFL Stats](#) | [GitHub](#)

- Built a scheduled ETL pipeline using Python, Celery, and Redis to automate weekly web scraping of NFL player statistics, ensuring the PostgreSQL database remains synchronized with current season data.
- Developed REST APIs with Django, enforcing rate limiting, strict CORS configurations, and CSRF middleware to mitigate abuse, while leveraging Redis caching and TanStack Query for efficient data retrieval.
- Containerized using Docker, configured Nginx as a reverse proxy to serve static React assets and route traffic, ensuring environment parity between local and production environments.
- Managed the full SDLC utilizing Agile development practices, constructing a GitHub Actions CI/CD pipeline that enforces flake8/npm linting, automated Django tests, and React mocking for rigorous quality assurance.
- Integrated Trivy container scanning to detect and resolve vulnerabilities before building and pushing Docker images to Docker Hub.

[VulGPT](#) | [GitHub](#)

- Built a concurrent vulnerability scanning backend leveraging Django Ninja and a Neo4j graph database.
- Integrated an asynchronous background task pipeline using Celery and Redis to fetch, parse, and ingest Open Source Vulnerabilities (OSV) JSON payloads while securely handling GitHub API rate limits.
- Used Google OR-Tools (CP-SAT) to calculate minimal-risk version upgrade paths, leveraging local Large Language Models (Ollama) for heuristic threat classification.
- Implemented a Neo4j GraphQL API to deliver real-time scan telemetry.
- Containerized the application stack using Docker and leveraged Flower to monitor task health and worker load.

[Anime Watchlist](#) | [GitHub](#)

- Integrated the AniList GraphQL API, leveraging Redis to cache trending anime data while persisting custom user watchlists within a PostgreSQL database.
- Hardened backend security using Django REST Framework, mitigating XSS and CSRF vulnerabilities by storing JWTs in HttpOnly cookies and validating CSRF tokens.
- Built a responsive frontend with React and Tailwind CSS, utilizing Axios interceptors to seamlessly manage session state and handle global API error states without interrupting the user experience.
- Containerized the application stack using Docker, configuring Nginx as a reverse proxy.

Skills

Python, SQL, JavaScript, Django, Pandas, NumPy, asyncio, aiohttp, BeautifulSoup, React, TanStack Query, Tailwind, HTML, CSS, Docker, Nginx, Redis, Celery, PostgreSQL, Neo4j, Git, GitHub Actions, Unit Testing, Web Scraping
